

# Type N Coupling Nut Change

## Modified Type N Coupling Nut Design

### Characteristics

- 3/4" Hex standard, no additional cost  
Previous coupling nut (Figure 1) only had a knurl on a round body.
- Both a Knurl and a 3/4" Hex  
This change ensures that our Type N connectors preserve the exact same form, fit, and function of our previous connector design, but with the added benefit of having 3/4" flats to allow for torquing with a wrench.

### Advantages

- High power and precision test components  
The majority of sales for these components support these applications where proper torque for good connector repeatability is crucial.
