

TEMPEST & Secure Products from SST

Secure Systems & Technologies Ltd (SST), specialise in the design and manufacture of TEMPEST, EMC, Rugged and Secure Networking, PC, Telephony and Enclosure products. SST have designed a wide portfolio of standard products, which come in a variety of options to meet our customer's every changing requirements.

SST's product range is largely based on leading brand commercial off the shelf equipment, which is then re-designed, tested and certified to TEMPEST level A, B or C.

Our in-house TEMPEST engineering team, review each aspect of the product design to achieve compliance with the minimal amount of aesthetic change to the outer packaging. Thus ensuring all products maintain the sleek attractive design originally specified by the OEM.

Our PC and Laptop products can be customised to include removable drives to ensure compliance to the strict data at rest requirements designated to SECRET or above. This paired with the option to remove near field comms, enable us to offer a suitable solution to even the most demanding requirements.

The UK's leading 'one stop shop' for all TEMPEST requirements, SST:

- **Reliable:** Have over 30 years' expertise and experience in the TEMPEST domain
- **Flexible:** Are the only organisation in the UK that can design, manufacture, assess, test, and certify TEMPEST level equipment and products under one roof.
- **Customer Service:** Deliver c and flexibility with on-call consultancy at an hourly rate via video conferencing or face-to-face site visits, as well as part-time TEMPEST Control Officer (TCO) availability.

TEMPEST Test & Design Consultancy

To augment its product offering, SST provides confidential consultancy, training and services throughout your TEMPEST project's life cycle. SST can provide confidential consultancy throughout a TEMPEST project. From writing TEMPEST control and test plans to Testing & Test reports we work closely with NCSC to provide our customers with an efficient route to NCSC approval. This includes supporting customers with "TEMPEST considerations" in the early stage of project or programme, training, problem solving and obsolescence management planning.

Based in a purpose built List-X facility in Gloucester. SST is authorised to carry out work that bears a UK Government classified designation. Under the scheme SST is allowed to securely store, process and manufacture material designated SECRET or above. SST is authorised to handle cryptographic materials, with all staff being security cleared.

TEMPEST Training

Operating from a purpose government accredited secure facility with experience combined with expertise in training, equipment installation, consultancy, and programme management, SST are uniquely positioned to support customers on all aspects of TEMPEST training.

Why TEMPEST Consultancy

We understand that returning to the design phase of a new product after TEMPEST non-compliance can be costly and incur significant unforeseen delays in the delivery time line.

Engaging our TEMPEST design consultants early in the design phase is a cost effective way to mitigate risk and:

- Ensure your product passes TEMPEST certification with minimum design re-engineering
- Saves you money by avoiding expensive retro-fixes later down the line
- Enables on-time delivery of your project
